SPECIFICATIONS (DIN 45 500)

MAIN AMP. SECTION

20 Hz~20 kHz continuous power output
both channels driven 2 × 100W (8Ω)
1 kHz continuous power output
both channels driven 2 × 150W (4Ω)
2 × 115W (8Ω)

Total harmonic distortion
rated power at 20 Hz~20 kHz 0.002% (8Ω)
rated power at 1 kHz 0.0007% (8Ω)
half power at 20 Hz~20 kHz 0.002% (8Ω)
half power at 1 kHz 0.0007% (8Ω)

Intermodulation distortion
rated power at 250 Hz: 8 kHz=4:1, 8Ω 0.005%
rated power at 50 Hz: 7 kHz=4:1, SMPTE, 8Ω 0.005%

Power bandwidth
both channels driven, -3 dB
5 Hz~60 kHz (8Ω, 0.025%)
Residual hum and noise 0.8 mV
Damping factor 30 (4Ω), 60 (8Ω)
Headphones output level and impedance 700 mV/330Ω

Load impedance
MAIN or REMOTE 4Ω~16Ω
MAIN and REMOTE 8Ω~16Ω

PRE AMP. SECTION

Input sensitivity and impedance
PHONO MM 2.5 mV/47kΩ
MC 170 μV/220Ω
TUNER, CD, AUX, TAPE 1, TAPE 2/DAT 150 mV/18kΩ
POWER AMP DIRECT 1V/47kΩ

PHONO maximum input voltage (1 kHz, RMS)
MM 160 mV
MC 12 mV
S/N

rated power (4Ω)
PHONO MM 79 dB (88 dB, IHF, A)
MC 70 dB (72 dB, 250 μV, IHF, A)
TUNER, CD, AUX, TAPE 1, TAPE 2/DAT 100 dB (IHF, A: 106 dB)

POWER AMP DIRECT 106 dB (IHF, A: 115 dB)
-26 dB power (4Ω)
PHONO MM 79 dB
MC 68 dB
TUNER, CD, AUX, TAPE 1, TAPE 2/DAT 86 dB

50 mW power (4Ω)
PHONO MM 76 dB
MC 69 dB
TUNER, CD, AUX, TAPE 1, TAPE 2/DAT 80 dB

Frequency response
PHONO RIAA standard curve
±0.2 dB (20 Hz~20 kHz)
TUNER, CD, AUX, TAPE 1, TAPE 2/DAT 0.8 Hz~150 kHz (-3 dB)
+0, -0.1 dB (20 Hz~20 kHz)

POWER AMP DIRECT 0.8 Hz~150 kHz (-3 dB)
Tone controls
BASS 50 Hz, +10 dB~-10 dB
TREBLE 20 kHz, +10 dB~-10 dB

Loudness control (volume at -30 dB)
50 Hz, +9 dB

Muting -20 dB
Output voltage and impedance
TAPE 1, 2/DAT REC OUT 150 mV
Channel balance, AUX 250 Hz~6,300 Hz ±1 dB
Channel separation, AUX 1 kHz 55 dB

DIGITAL SECTION

Harmonic distortion 0.002%
Total harmonic distortion 0.003%
S/N 110 dB
Dynamic range 99 dB
Frequency response 2 Hz~20 kHz, +0.3 dB, -0.3 dB

GENERAL

Power consumption 765W
Power supply
For continental Europe AC 50 Hz/60 Hz, 220V
For United Kingdom, Australia and others AC 50 Hz/60 Hz, 110V/127V/220V/240V
Dimensions (W×H×D) 430 × 158 × 397 mm (16-15/16" × 6-7/32" × 15-5/8")
Weight 13.2 kg (29.04 lb.)

Notes:

- Specifications are subject to change without notice. Weight and dimensions are approximate.
- Total harmonic distortion is measured by the digital spectrum analyzer (H.P. 3045 system).

SU-V90D

BEFORE REPAIR AND ADJUSTMENT	Page 2	PRINTED CIRCUIT BOARDS	Page 23 ~ 28
PROTECTION CIRCUITRY	2	BLOCK DIAGRAM	29,30
ACCESSORY	2	WIRING CONNECTION DIAGRAM	31,32
LOCATION OF CONTROLS	3, 4	FUNCTION OF IC TERMINALS	33,34
CONNECTIONS	5, 6	MEASUREMENTS AND ADJUSTMENTS	35,36
DISASSEMBLY INSTRUCTIONS	7 ~ 10	EXPLODED VIEW	37 ~ 40
SCHEMATIC DIAGRAM	11 ~ 22	REPLACEMENT PARTS LIST	41 ~ 43
TERMINAL GUIDE OF TRANSISTORS, DIODES AND IC'S	22	RESISTORS AND CAPACITORS	44 ~ 46

BEFORE REPAIR AND ADJUSTMENT

- Turn off the power supply. Using a 10Ω, 10W resistor, shortcircuit both ends of power supply capacitors (C609, C610) in order to discharge the voltage.
- Before turning on the power switch of the unit.
 - Connect the voltage controller to the primary side.
 - Connect the AC ampere meter to the primary side or connect the DC voltage meter to the "±B" circuit of the secondary side.
 - Turn the VR of ICQ (VR401, VR402, VR551 and VR552) to minimum (counterclockwise).
 - After setting the output to zero of the voltage controller, turn on the power switch of the unit. And increase the output of voltage controller gradually. Then, check carefully whether the current value of primary side become more than following value or whether the DC voltage of secondary side is increasing slowly.
 - If the value of current is increasing unusually or the DC voltage is not increasing, lower the output level of voltage controller immediately.
 - The current value of the primary side at no signal. (Confirm the power supply voltage of each area and provided voltage of the unit.)

Power supply voltage	AC110V	AC127V	AC220V	AC240V
Consumed current 50/60Hz	270 ~ 730mA	240 ~ 630mA	130 ~ 370mA	120 ~ 330mA

PROTECTION CIRCUITRY

The protection circuitry of the amplifier may have operated if either of the following conditions is noticed:

- No sound is heard when the power is turned on.
- Sound stops during a performance.

The function of this circuitry is to prevent circuitry damage if, for example, the positive and negative speaker connection wires are "shorted", or if speaker systems with an impedance less than the indicated rated impedance of the amplifier are used.

If this occurs, follow the procedure outlined below:

- Turn off the power.
- Determine the cause of the problem and correct it.
- Turn on the power once again.

Note:

When the protection circuitry functions, the unit will not operate unless the power is first turned off and then on again.

ACCESSORY

- AC power supply cord..... 1

For United Kingdom and some areas, the power cord is directly attached to the unit.
Configuration of AC power supply cord differs according to area.

No. 4-1, Hamamatsu-cho 2-Chome, Minato-ku,
Tokyo 105, Japan

LOCATION OF CONTROLS

1 Power switch (power)

2 Speaker selectors (speakers)

These selectors are used to turn the speaker systems on and off.

3 Operation indicator (operation)

This indicator illuminates approximately 5 seconds after the power is switched ON, indicating that this unit is in the operational condition. If there is any abnormal condition of the output signals to the speaker systems (such as, for example, a short-circuit of the speaker connection wires, etc.), this abnormal condition will be detected, the protection circuitry will function, and this indicator will stop illumination.

4 Sampling frequency indicators (sampling frequency)

These indicators function to illuminate to indicate the detection of the sampling frequency of the digital signals input to the "DIGITAL INPUT" terminals on the rear panel of this unit. (Illumination occurs when digital signals are received, even a digital component is not in the play mode.)

32 kHz: For digital signals with the sampling frequency of 32 kHz mode

44.1 kHz: CD and others

48 kHz: For digital signals with the sampling frequency of 48 kHz mode

5 Audio muting switch (muting)

Set to the "-20 dB" position when a disc is being changed or to temporarily reduce the volume level (approx. 1/10).

6 Loudness switch (loudness)

Set to the "on" position when listening to music at low volume. Auditory perception of sound in the low frequency range falls off at low volume, but when the switch is in this position, this deficiency is compensated for, so that the full impact of the musical performance can be enjoyed.

7 Digital input selector (digital input)

This selector is used when a component connected to one of the "DIGITAL INPUT" terminals (on the rear panel of this unit) is to be used as the sound source.

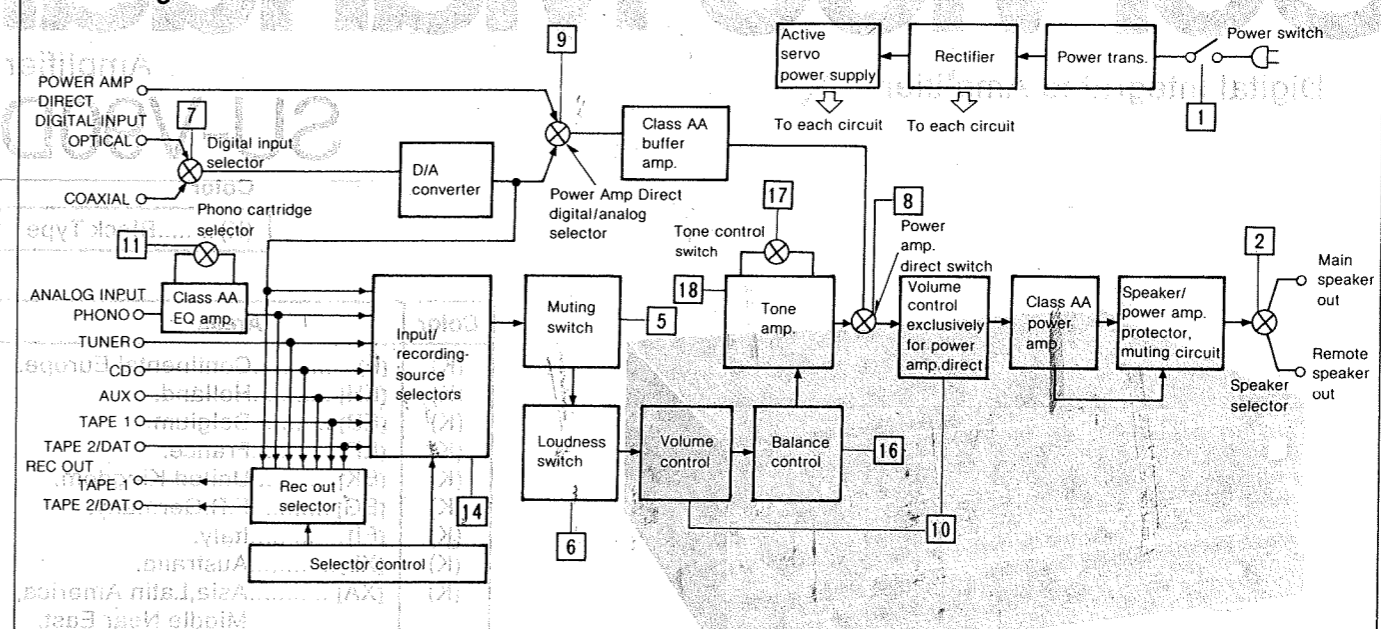

8 Power amplifier direct switch/indicator (power amp direct)

When this switch is switched ON (Indicator will illuminate.), a superior level of tone quality can be obtained, because the signals from the component connected to the "POWER AMP DIRECT" terminals or the "DIGITAL INPUT" terminals are sent directly to the sound volume, without passing through the tone control circuit, etc. of this unit.

9 Digital/analog selector (digital/analog)

This selector is used (when the power amp direct is ON) to select, as the signal source, either the component connected to the "DIGITAL INPUT" terminals or the component connected to the "POWER AMP DIRECT" terminals. One of the indicators will indicate which source is selected.

Block diagram

10 Volume control/indicator (volume)

There are two types of volume scale indications: one for when the power amp direct is OFF, and one for when it is ON. (Indicator will illuminate.)

11 Phono cartridge selector (phono selector)

This selector should be set to the position which corresponds to the type of cartridge used on the turntable.

MM (M): Set to this position when using a moving-magnet type cartridge or high-output moving-coil cartridge (1 mV or more).

MC (C): Set to this position when using a moving-coil type cartridge.

12 Recording output signal indicators (recording selector)

These indicators indicate the sound source which can be recorded.

13 Input signal indicators (input selector)

These indicators indicate the sound source of the sound being heard from the speakers.

14 Input/recording-source selectors

Press to select the sound source to be listened to and/or the sound source to be recorded. Note that the function of these selectors changes depending upon the setting of the recording-mode selector. (Refer to "Recording-mode selector/indicator".)

15 Recording-mode selector/indicator (rec mode)

This selector is used to select the signal to be recorded by the connected tape deck.

When this selector is pressed, the indicator flashes ON and OFF repeatedly; when one of the input/recording-source selector is then pressed, this indicator changes from flashing to a steady illumination.

If this selector is pressed while one of the recording output signal indicators is illuminated, the recording-mode indicator will change from a steady illumination to repeated flashing; when it is pressed once again, the indicator will be extinguished.

When the recording-mode indicator is not illuminated:

If one of the input/recording-source selectors is pressed, the sound source to be listened to and the recording sound source will both be switched at the same time.

When the recording-mode indicator is flashing:

If one of the input/recording-source selectors is pressed, only the recording sound source will be switched.

When the recording-mode indicator is illuminated:

If one of the input/recording-source selectors is pressed, only the sound source to be listened to will be switched.

16 Balance control (balance)

This control is used to adjust left/right volume balance.

17 Tone control switch (tone control)

Set this switch to the "on" position if you want to adjust the bass or treble tone quality.

18 Tone controls (bass/treble)

The bass control is for the low-frequency sound range, and the treble control is for the high-frequency sound range.

19 Headphones jack (phones)

CONNECTIONS

Placement with other equipment

If this unit is to be placed on top of a component that has a lesser depth dimension, be sure to first change the location of the rear "feet" of this unit, as described below.

- Remove the screws from the 4 feet of this unit, and then remove the 4 insulators.

- Re-install the front feet in their former positions, and install the rear feet in the positions shown in the illustration. (Be sure to fit the projections into the holes correctly before tightening the 4 screws).

Note:

If the feet are later re-installed at their original locations, be sure to use the insulators in the way that they were originally installed.

Connections to analog terminals

Make connections to each component in the system by using stereo connection cables (option).

Note: Careful note should be taken of the following points. If these points are not heeded, a malfunction of the unit's operation could occur.

- Only analog-type components should be connected to the analog input terminals.
- Only digital-type components should be connected to the digital input terminals.
- Optical-fiber cables must absolutely never be bent.

Connections to "DIGITAL INPUT" terminals

"COAXIAL" terminal

This terminal can be used for the connection of a compact disc player equipped with a "DIGITAL" terminal or a digital audio tape deck (DAT) used for playback only, etc.

About the "COAXIAL" terminal

This terminal is a 75-ohm coaxial terminal; using a toroidal pulse transformer, it functions to provide electrical oscillation between components, thereby preventing signal deterioration resulting from noise generated within the ground loop, etc.

"OPTICAL" terminal

This terminal can be used for the connection of a compact disc player equipped with a "DIGITAL" terminal or a digital audio tape deck (DAT) used for playback only, etc.

About the "OPTICAL" terminal

This terminal is an optical-connector terminal; because electric signals are converted to optical signals for transmission, there is no adverse effect upon the signals as a result of externally generated electrical noise, thus making possible the transmission of digital audio signals of extremely high quality.

Use of the "OPTICAL" terminal

A dust-protection cap is used to cover and protect the "OPTICAL" terminal. Remove this cap only when the "OPTICAL" terminal is to be used.

Note:

Be sure to use the dust-protection cap to again cover the "OPTICAL" terminal when it is not being used. This cover serves to prevent the entry of dust, etc. into the terminal, because such foreign material can cause incorrect operation.

"SPEAKERS" terminals

Load impedance:

- When only the "MAIN" or only the "REMOTE" terminals are used: 4-16 ohms
- When both the "MAIN" and the "REMOTE" terminals are used simultaneously: 8-16 ohms

Connection of speaker wires

- Strip off the outer covering, and twist the center conductor.
- Turn 5-6 times.
- Insert wire and tighten screw completely.

Notes:

- To prevent damage to circuitry, never short-circuit plus (+) and minus (-) speaker terminals.
- Be sure to only connect positive (+) cords to positive (+) terminals, and negative (-) cords to negative (-) terminals.

Main speaker systems (option)

Remote speaker systems (option)

AC power supply cord (included)

- For United Kingdom and some areas, the power cord is directly attached to the unit.
- Fit a suitable plug to the AC power supply cord.
- Configuration of AC power supply cord differs according to area.

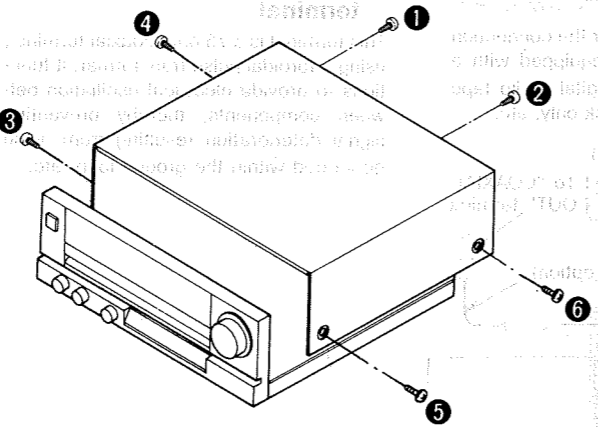

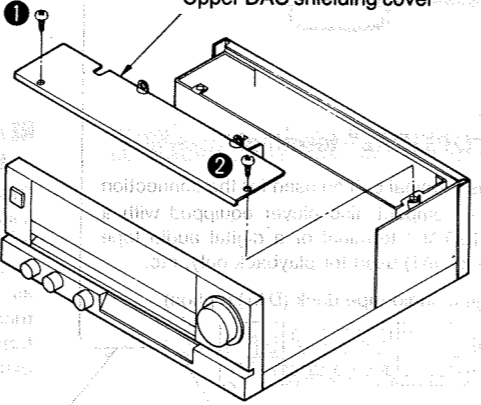

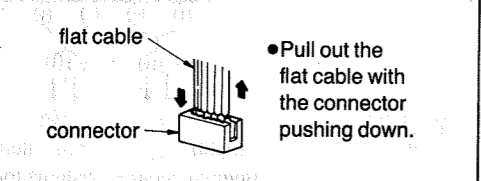

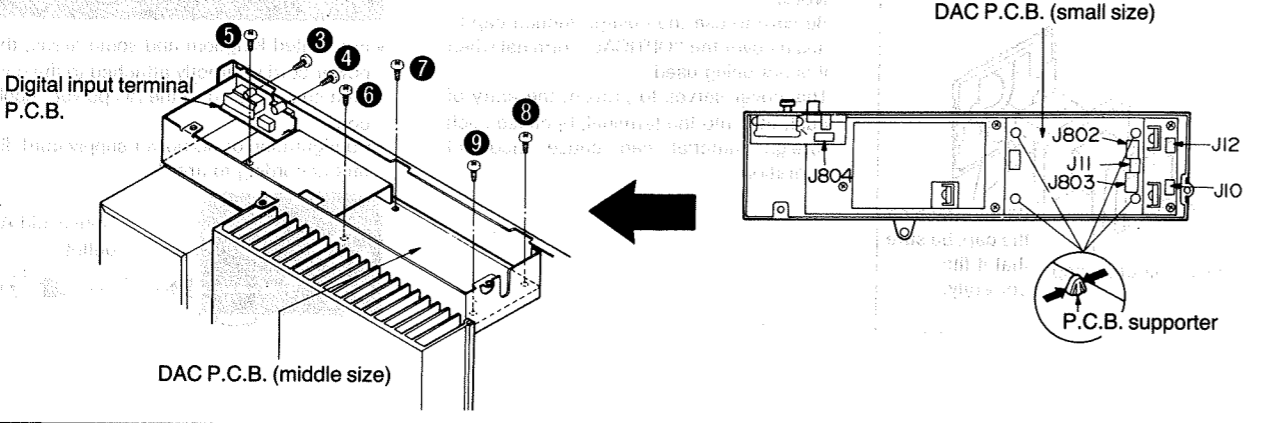

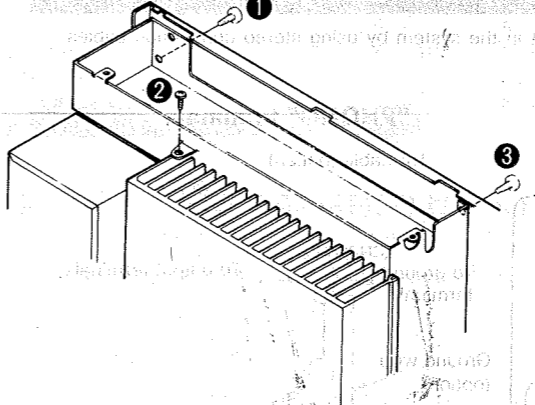

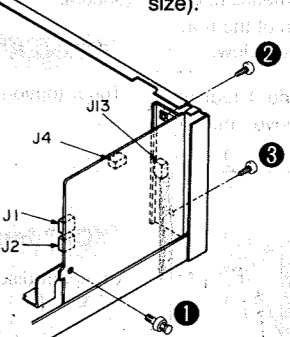

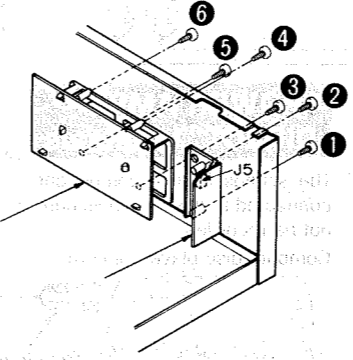

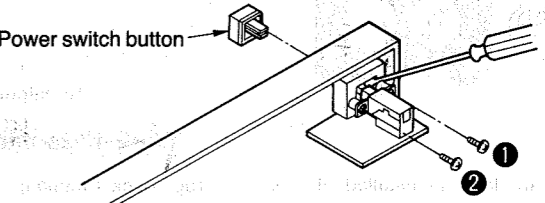

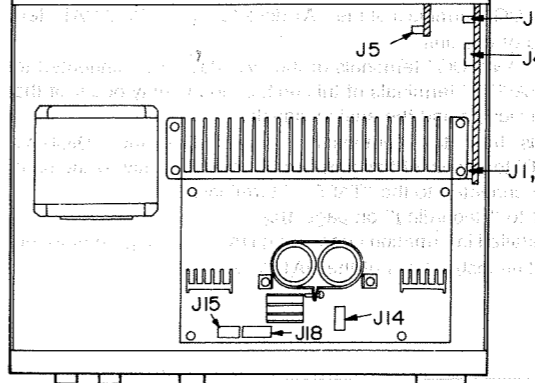

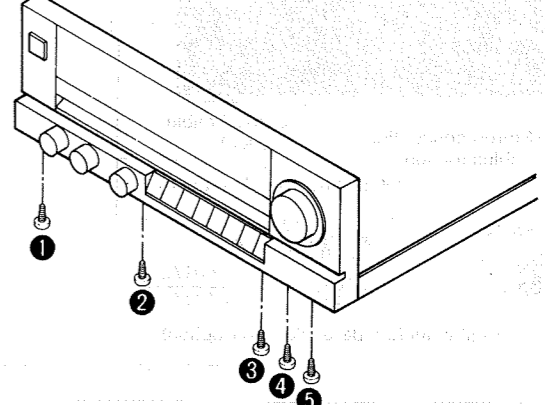

About the "DIGITAL INPUT" terminals and digital audio tape deck (DAT) connections

- If connections are made to this unit from a "DIGITAL OUT" ("OPTICAL" or "COAXIAL") terminal of the digital audio tape deck and, at the same time, from its "ANALOG" ("LINE IN" and "LINE OUT") terminals, make the connection from the "ANALOG" terminals of the DAT deck to the "TAPE 2/DAT" terminals of this unit.
 - If the "ANALOG" terminals of the DAT deck are connected to the "TAPE 1" terminals of this unit, a "loop" may occur of the digital signals and the analog signals.
 - Sounds from the component connected to the "DIGITAL INPUT" terminals of this unit can be recorded only by the tape deck connected to the "TAPE 1" terminals. (Refer to "Recording" on page 10.)
- For detailed information concerning DAT recording, refer to the operating instructions of the DAT deck.

Ref No. 8

How to remove the headphones, the tone, the power amp. direct, the LED, the main volume and phono selector P.C. Boards

Procedure
7→8

•Headphones P.C.B.

1. Remove the 2 screws (1) and (2).
2. Remove the headphones P.C.B. by releasing the claw in the direction of the arrow.

•Tone P.C.B.

3. Remove the 3 knobs (3~5) and 3 nuts (6~8).
4. Remove the tone P.C.B. by releasing the 2 claws in the direction of the arrows.
5. Disconnect the connector (J17).

•LED P.C.B.

6. Remove the LED P.C.B. by releasing the 2 claws in the direction of the arrows.

•Power amp. direct P.C.B.

7. Remove the 2 screws (9) and (10).
8. Disconnect the connector (J6).
9. Remove the power amp. direct P.C.B. by releasing the 3 claws in the direction of the arrows.

•Main volume P.C.B.

10. Remove the knob (11) and the nut (12).

•Phono selector P.C.B.

11. Remove the 2 screws (13) and (14) and remove the phono selector P.C.B.

Ref No. 9

How to remove the indicator P.C.B.

Procedure
7→8→9

1. Remove the indicator P.C.B. by releasing the 6 claws in the direction of the arrows.

Ref No. 10

How to remove the operation switch P.C.B.

Procedure
7→8→9→10

1. Remove the 3 screws (1~3).
2. Remove the operation switch P.C.B. in the direction of the arrow.

Ref No. 11 How to remove the main P.C.B.

Procedure
1→2→3→4→12

1. Pull out the 3 flat cables (J14, J15 and J18).
2. Remove the 8 screws (①~⑧).

Ref No. 12 How to remove the power transistors

Procedure
1→2→3→
4→11→12

1. Unsolder the terminals of the power transistors.
2. Remove the 4 screws (①~④).

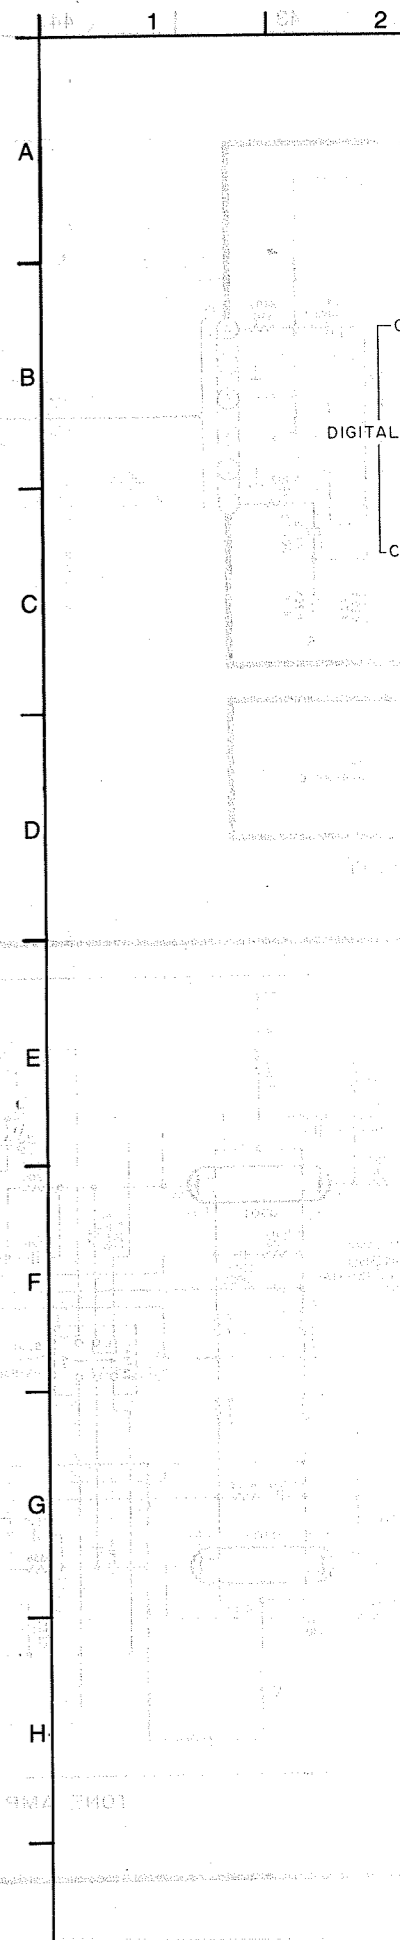

Caution:
When reinstalling the power transistors, be sure to apply silicone compound (SZZ0L15) to the back of the power transistors.

SCHEMATIC DIAGRAM

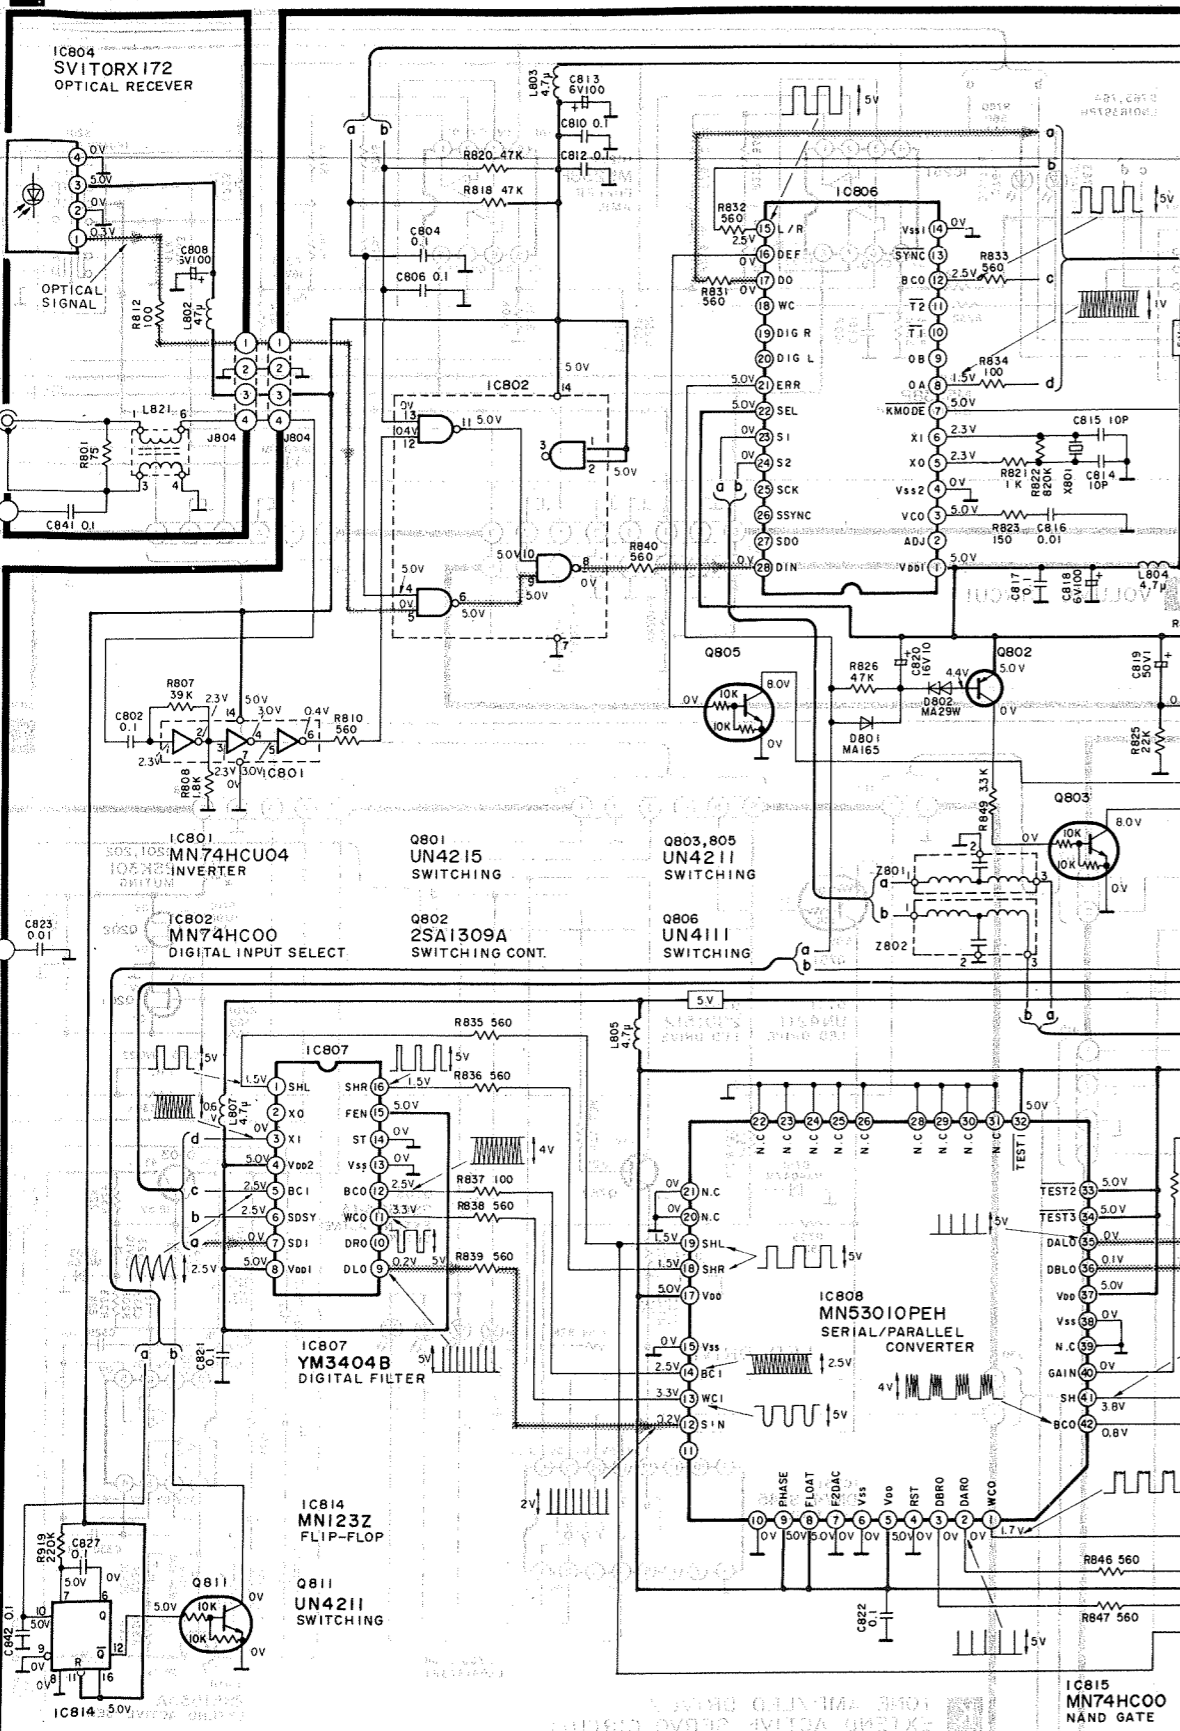

(This schematic diagram may be modified at any time with the development of new technology.)

1. S1 : Power switch in "on" position.
(■ off, ■ on)
2. S2 : Voltage selector in "240 V" position.
For (EK), (XL), (XA), (PA) and (PC) areas.
3. S101 : Phono selector switch in "MM" position.
(■ MM, ■ MC)
4. S201 : Power amp direct switch in "off" position.
(■ off, ■ on)
5. S202 : Digital/analog selector switch in "analog" position.
(■ analog, ■ digital)
6. S203 : Audio muting switch in "0 dB" position.
(■ 0 dB, ■ -20 dB)
7. S204 : Loudness switch in "off" position.
(■ off, ■ on)
8. S301 : Tone control switch in "defeat" position.
(■ defeat, ■ on)
9. S501-1 : Speaker select switch in "on" position.

10. S501-2 : Speaker select switch in "main" position.
(■ main, ■ remote)
11. S701~S706, S708, S709 : Input/recording-source selector switch in "phono" position.
S701: phono S702: digital S703: tuner
S704: CD S705: aux S706: tape 1
S708: tape 2/DAT S709: rec mode
12. S801 : Digital input selector switch in "optical" position.
(■ optical, ■ coaxial)
13. [Symbol] : Optical signal (Lch). [Symbol] : Phono signal (Lch).
14. [Symbol] : Positive voltage lines.
15. [Symbol] : Negative voltage lines.
16. Indicated voltage values are the standard values for the unit measured by the DC electronic circuit tester (high-impedance) with the chassis taken as standard. Therefore, there may exist some errors in the voltage values, depending on the internal impedance of the DC circuit tester.
17. Important safety notice:
Components identified by Δ mark have special characteristics important for safety. When replacing any of these components, use only manufacturer's specified parts.

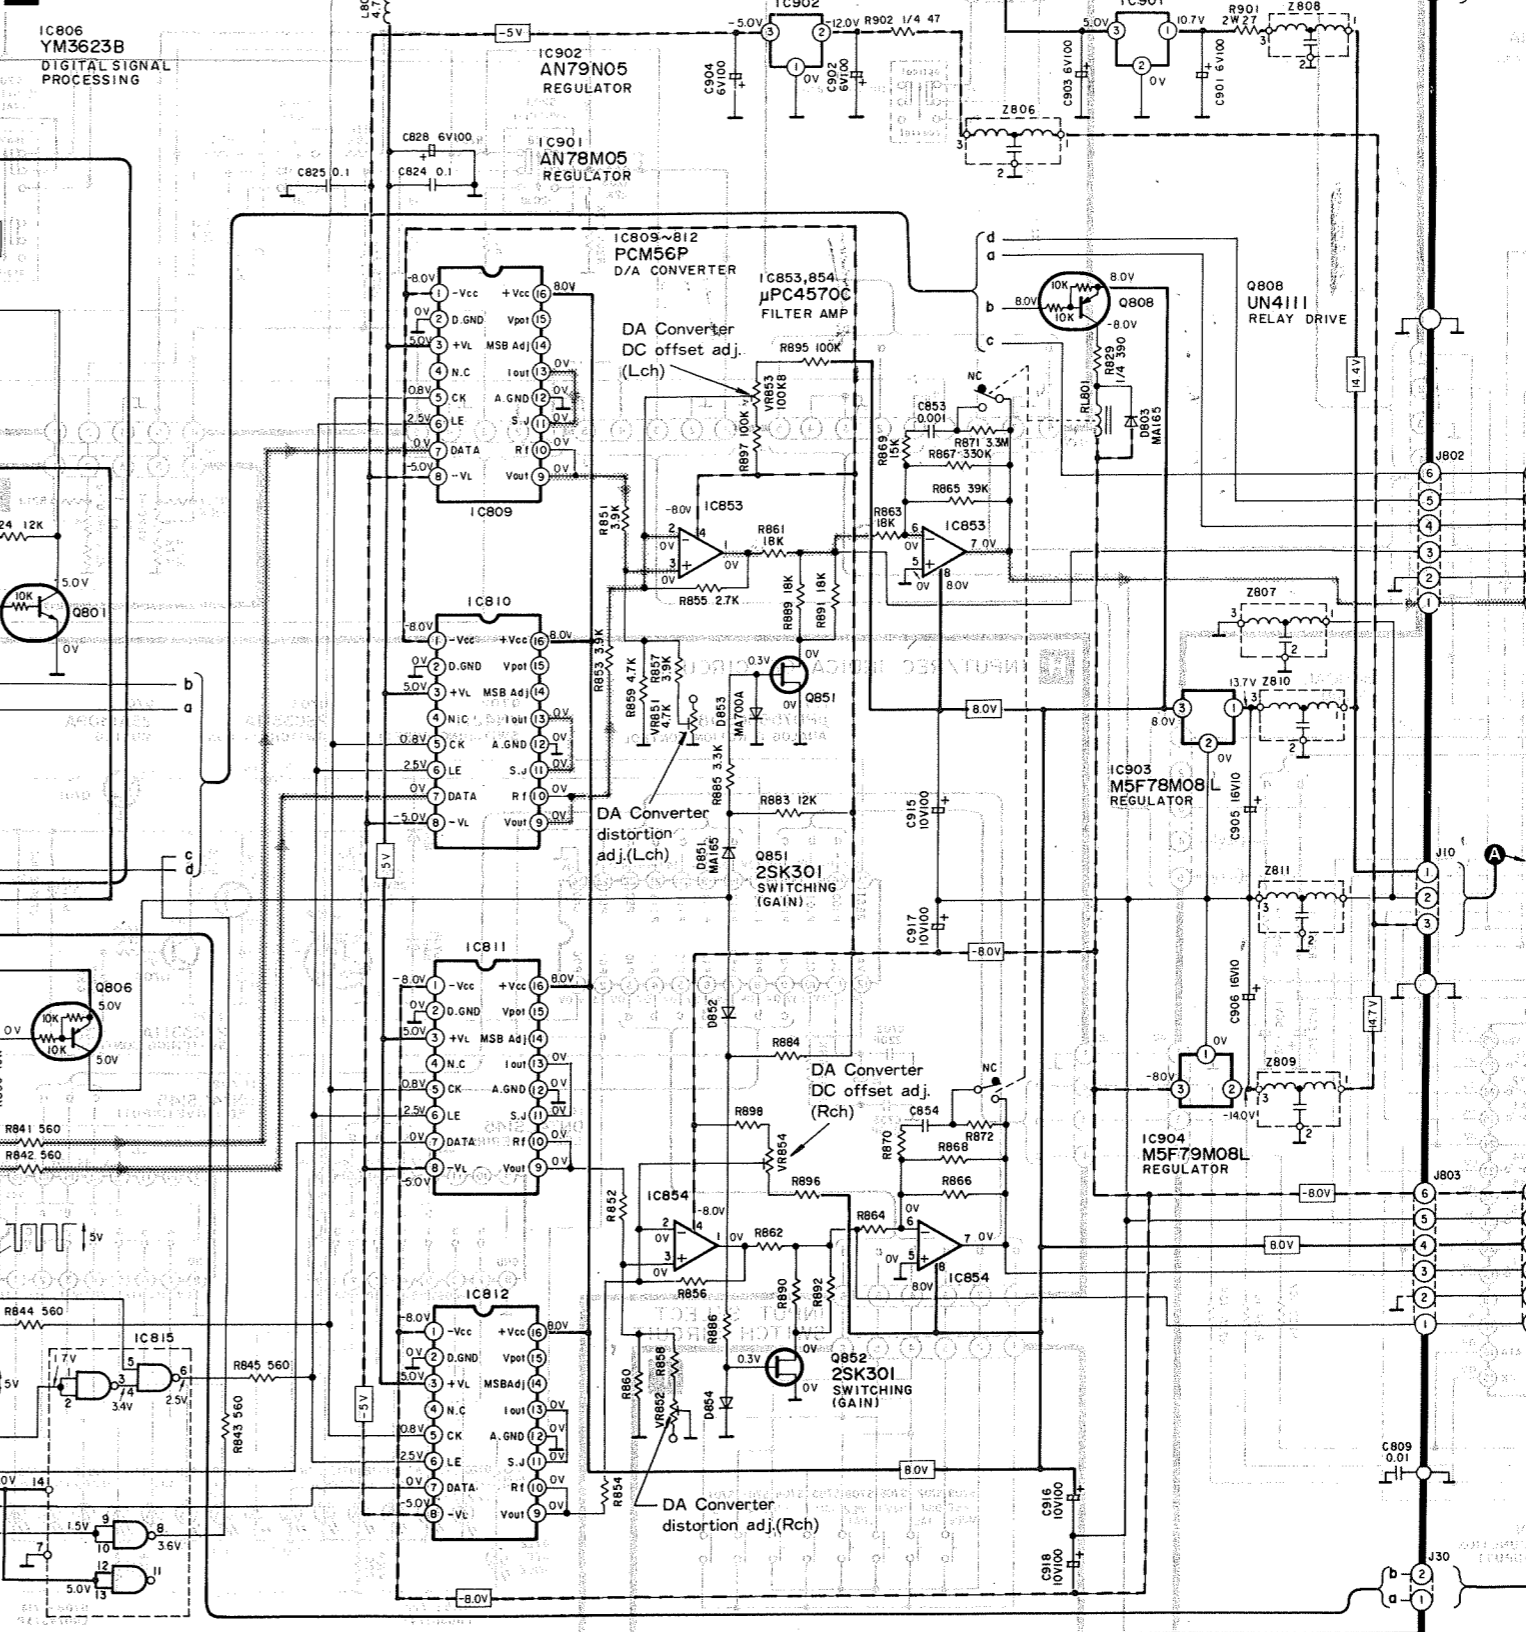

***Caution!**
IC and LSI are sensitive to static electricity.
Secondary trouble can be prevented by taking care during repair.
*Cover the parts boxes made of plastics with aluminum foil.
*Ground the soldering iron.
*Put a conductive mat on the work table.
*Do not touch the legs of IC or LSI with the fingers directly.

WIRING CONNECTION DIAGRAM

FUNCTIONS OF IC TERMINALS

IC806 (YM3623B) DIGITAL INTERFACE RECEPTION

(PU) terminals are "pulled up".

Pin No.	Terminal Name	I/O	Function																								
1	VDD1	—	This is the power connection terminal (+5 V).																								
2	ADJ	I	This terminal is for the adjustment of the VCO oscillation frequency, but it is not used in this unit.																								
3	VCO	I/O	This is the external condenser terminal for the VCO circuitry.																								
4	VSS2	—	This is the ground connection terminal of the system.																								
5	XO	O	This is the output terminal for the crystal vibrator (16.9344 MHz).																								
6	XI	I	This is the input terminal for the crystal vibrator.																								
7	KMODE	I (PU)	At a high level... the PLL circuitry is activated when the DIN terminal receives an input signal. Otherwise, the crystal vibrator is activated. At a low level... the crystal vibrator is activated, regardless of the DIN terminal input.																								
8	ØA	O	This terminal outputs a 16.9344-MHz frequency when the crystal vibrator functions. When the PLL circuitry is activated, the frequency varies according to the speed of input data of the DIN terminal (fs=about 16.9344 MHz when it is 44.2 kHz).																								
9	ØB	O	The frequency of this terminal is divided into a third of that of terminal ØA when the crystal vibrator functions. When the PLL circuitry is activated, the frequency varies according to the speed of input data of the DIN terminal (fs=about 16.9344 when it is 44.2 kHz).																								
10	T1	I (PU)	This is the input terminal for checking the internal circuitry.																								
11	T2	I (PU)	This is the input terminal for checking the internal circuitry.																								
12	BCO	O	Used to output the time-clock signal from the DO terminal.																								
13	SYNC	O	Used to output the synchronization signal.																								
14	VSS1	O	This is the ground connection terminal of the system (+0 V).																								
15	L/R	O	At a high level... data on the left channel is output from the DO terminal. At a low level... data on the right channel is output from the DO terminal.																								
16	DEF	O	At a high level... input data is emphasized. At a low level... input data is not emphasized.																								
17	DO	O	Outputs 16-bit data.																								
18	WC	O	This is the terminal for checking data output to the DO terminal.																								
19	DIGR	O	This terminal outputs the signal for the right channel.																								
20	DIGL	O	This terminal outputs the signal for the left channel.

MEASUREMENTS AND ADJUSTMENTS

Control positions and equipment used.

- Volume knob.....∞ (Minimum)
- Main speaker selector.....off
- Remote speaker selector.....off
- DC electronic voltmeter(EVM)

VOLTAGE CONTROL(V)AMP.IDLING(ICQ) ADJUSTMENT

1. Test equipment connection is shown in figure. (Connect the DC EVM on both channels.)
2. Completely turn the (V) amp. adjusting volumes (VR401, VR402) counter-clockwise.
3. Turn ON the set when it is cold, and immediately adjust VR401 and VR402 so that the voltage is 25mV. Also, check that the voltage is 25 ~ 30mV (standard: 27mV) after lapse of 10 ~ 15 minutes. (Below 30mV after lapse of 20 min.)

TPA=TP401, TPB=TP402

CURRENT DRIVE(C)AMP.IDLING(ICQ)ADJUSTMENT

1. Test equipment connection is shown in figure. (Connect the DC EVM on both channels.)
2. Completely turn the (C) amp. adjusting volumes (VR551, VR552) counter-clockwise.
3. Turn ON the set when it is cold, and after the adjustment of the (V) amp. ICQ, adjust VR551 and VR552 so that the voltage is 3mV. Also, check that the voltage is 4 ~ 7mV (standard: 5mV) after lapse of 10 ~ 15 minutes. (Below 10mV after lapse of 20 min.)

TPA=Z551, TPB=Z552

DA CONVERTER DC OFFSET ADJUSTMENT

1. Test equipment connection is shown in figure. (Connect the DC EVM on both channels.)
2. Adjust VR853 and VR854 so that the voltage are less than 1 mV in 3 mV range.

TPA=TP801, TPB=TP802

Note:

After replacing or repairing IC809-812 (Part No. PCM56P-J), rotate VR851 and VR852 fully clockwise (to point C) and counterclockwise (to point A). Afterwards, set the middle points between A and C to their center positions (B).

VR851 and VR852

REPLACEMENT PARTS LIST

ELECTRIC PARTS LIST

Notes : * Important safety notice :
 Components identified by Δ mark have special characteristics important for safety. When replacing any of these components use only manufacturer's specified parts.
 * Bracketed indications in Ref. No. columns specify the area. (Refer to the first page for area.)
 Parts without these indications can be used for all areas.
