**■ BEFORE REPAIR**

- (1) Turn off the power supply. Using a 10Ω, 5 W resistor connect both ends of power supply capacitors (C705, C706, 6800 μF) in order to discharge the voltage.
- (2) Before turning the power supply on, after completion of repair, slowly apply the primary voltage by using a power supply voltage controller to make sure that the consumed current at 50 Hz/60 Hz in NO SIGNAL mode should be shown below with respect to supply voltage 220 V/240 V.

Power supply voltage	AC 220 V	AC 240 V
Consumed current 50 Hz	60~240 mA	55~220 mA
Consumed current 60 Hz	56~227 mA	52~208 mA

**■ PROTECTION CIRCUITRY**

The protection circuitry may have operated if either of the following conditions is noticed:

\*No sound is heard when the power is switched ON.

\*Sound stops during a performance.

The function of this circuitry is to prevent circuitry damage if, for example, the positive and negative speaker connection wires are "shorted", or if speaker systems with an impedance less than the indicated rated impedance of this unit are used.

If this occurs, follow the procedure outlined below:

1. Switch OFF the power.
2. Determine the cause of the problem and correct it.
3. Switch ON the power once again.

**Note:**

When the protection circuitry functions, the unit will not operate unless the power is first switched OFF and then ON again.

**■ ACCESSORY**

- AC power supply cord ..... 1  
Configuration of AC power supply cord differs according to area.

SJA193 (1.5 m) ..... For (EB) area only.

SFDAC05E03 (1.5 m) ..... For others.

# ■ LOCATION OF CONTROLS

## ●Front Panel

**1 Power switch/indicator (power)**

**2 Volume control (volume)**

**3 Input selector (input selector)**

This selector is used to select the sound source to be heard, such as a disc, radio broadcast, etc.

**4 Tape-monitor selectors (tape monitor)**

The left selector is used to playback or monitor the sound from a tape deck 1 (or DAT) or to record from tape deck 1 (or DAT) to 2.

The right selector is used to playback or monitor the sound from a tape deck 2 or to listen to the sound processed by a graphic equalizer.

**5 Loudness switch (loudness)**

This switch is used when listening to music at a low volume level. Auditory perception of sound in the low frequency range falls off at low volume, but when the switch is set to the "on" position, this deficiency is compensated for, so that the full impact of the musical performance can be enjoyed.

**6 Tone control switch (tone control)**

This switch is used to turn the tone control circuit (bass, treble) on or off.

**7 Balance control (balance)**

This control is used to adjust the left/right volume balance.

**8 Tone controls (bass/treble)**

The bass control is used to adjust the low-frequency sound range, and the treble control is used to adjust the high-frequency sound range.

**9 Speaker selectors (speakers)**

These selectors are used to turn the speaker systems on and off.

**10 Headphones jack (phones)**

## ●Rear Panel

\*Phono input capacitance is about 270 pF.

## CONNECTIONS

### System configurations

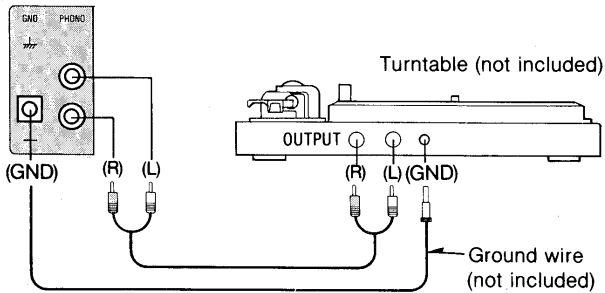

### To connect to each terminals

Make connections to each component in the system by using stereo connection cables (not included).

#### “PHONO” terminals

Connect a turntable.

#### “CD” terminals

Connect a compact disc player.

#### “TUNER” terminals

Connect a tuner.

#### “AUX” terminals

Connect a component such as a video disc player (audio only connectable), etc.

### "TAPE 2/ADAPT" terminals

Connect a second tape deck or a graphic equalizer.

### "TAPE 1/DAT" terminals

Connect a first tape deck or a digital audio tape deck (DAT).

### To connect the AC power supply cord (included)

Connect the AC power supply cord (included) after all other cables and cords are connected.

**Note:** Configuration of AC power supply cord differs according to area.

### Connection to speaker systems

One pair of speaker systems can be connected to the "A" terminals of this unit and one pair to the "B" terminals.

#### Load impedance

- When only the "A" or only the "B" terminals are used: 4-16 ohms
- When both the "A" and the "B" terminals are used simultaneously: 8-16 ohms

### To connect main (A) and/or second (B) speaker systems

### To connect cords to terminals

- ① Strip off the outer covering, and twist the center conductor. 10 mm (13/32") Twist.

- ② Turn 5 or 6 times.

- ③ Insert the wire and tighten screw completely. Pull the wire to assure a proper connection.

**Note:** Be sure to only connect positive (+) cords to positive (+) terminals, and negative (-) cords to negative (-) terminals.

**Note:** To prevent damage to circuitry, never short-circuit the plus (+) and minus (-) speaker terminals.
